

TERMS FOR TEST 2

10,000 hours = 3 hr day for 10 years

1st to study memory as it occurred

1st to study memory experimentally

3 types of distinctiveness

7 plus or minus 2

absentminded professor effect

abstract thinking

acetylcholine

acronyms

acrostics

action potential

active memory

algorithms

amygdala

analogical transfer

autobiographical memory

aviary model

axon hillock

backward conditioning

bizarre images

category search

chunks

circadian rhythm

classical conditioning

cochlea

coin features

complete memory

concrete operational stage

concrete thinking

conditioned response (CR)

conditioned stimulus (CS)

confabulation

conservation

consolidation

decay theory

declarative memory

difficulty and list length

distributed practice

dyssomnia

Ebbinghaus
echoic memory
elaboration mnemonic
emblems
emotional distinctiveness
episodic memory
Erikson
everyday memory
extinction
figure & ground
formal operational stage
forward conditioning
free recall
functional fixedness
Galton
gender identity
gender role
gestures
gods of memory
hands
heuristics
hippocampus
iconic memory
insight
interactive images
interference theory
inter-stimulus interval
Kohlberg's stages
learning linearly to study time
link & story schemes
magical thinking
massed practice
memory
method of loci
micro expressions
most important first (primacy effect)
most important last (recency effect)
naive mnemonics
narcolepsy
negative punishment
negative reinforcement
operant

over-learning
parasomnias
partially reinforced behavior
peg-word system
Piaget
pinna
positive punishment
positive reinforcement
practical memory
pragnanz
preoperational stage
primary distinctiveness
primary memory
proactive interference
procedural memory
prospective memory
punishment
recall falls off gradually (motor)
recall falls off rapidly (verbal)
reduction mnemonics
reflex
rehearsal
reinforcement
repetition
restless legs syndrome
retroactive interference
rhymes
savings
schema
scribe model
scripts
secondary distinctiveness
semantic memory
sensory-motor stage
serial position effect
serial recall
sexual development
shaping
simultaneous conditioning
single glance of marbles
Skinner
sleep apnea

sleep cycle
sleep disorder
sleep walking
soma
songs
spatial memory
sperm
spontaneous recovery
stapes
steps and pulses
STM (short-term memory)
successive approximations
technical mnemonics
theories of forgetting
theory of emotion
total time hypothesis
translation schemes
unconditioned response (UR)
unconditioned stimulus (UCS)
visualization
vividness of visual imagery
VonRestorff effect
wax tablet model
working memory
